

INTRODUCING

# MALDI prep. Simplified.

Automated rapid clean-up of positive  
blood cultures for direct ID by MALDI

## Already have a rapid molecular ID?

### Expand your breadth of ID menu for positive blood cultures

Now that your MALDI is easy to use direct from positive blood cultures, go from a limited syndromic molecular panel to your full MALDI database.

### Lower your cost to rapidly identify organisms from positive blood cultures<sup>1</sup>

Your total cost to rapidly identify organisms from positive blood cultures could be at least 50% less than what you're paying today for a rapid molecular ID solution.

### Minimize wasted kits<sup>2</sup>

For some labs, roughly 30% of rapid molecular tests turn up as contaminants. A direct MALDI ID reflexed to a rapid AST solution could offer a high-value workflow with fewer wasted kits.

## Just 2-3 minutes of hands-on time.

That's all it takes for the Accelerate Arc™ module and BC kit.  
Now it's easy enough to ID positive blood cultures by direct MALDI.
